Squawk

2.2 Troubleshoot and repair broken ground wire on nose landing gear: Replaced nose landing gear grounding wires with new PN's 30-2305027-00 and 30-2305026-00 in reference to the F7X AMM 32-21-11-900-801.

2.3 Troubleshoot and repair - Engine Vibration CAS message: After swapping the No. 1 and No. 2 engine vibration sensors, engine runs and operational checks showed all three engine vibration values to be within acceptable limits. The lowest vibration reading was the No. 3 engine at 20% vibration, at full takeoff power, and the highest was the No. 1 engine at 70%, at full takeoff power. Returned the No. 1 and No. 2 engine vibration sensors to their original positions, No. 1 engine sensor is now PN 6254M34 SN UI EDBA000A171, the No. 2 engine sensor is now PN 625M34 SN UI EDBA000A286. A second engine run was performed, and the vibration readings showed the No. 1 engine at 36%, at full takeoff power, and the No. 2 engine at 29%, at full takeoff power. Maintenance Control declined further troubleshooting. Work complied with in reference to the F7X AMM 77-30-05-900-801. No discrepancies noted.

==========

The airframe, engine and/or component identified herein was repaired and inspected in accordance with the Keystone Aviation LLC Continuous Airworthiness Maintenance Program (CAMP) and 14 CFR under which the operator is certified and is approved for return to service as per those requirements. Pertinent details of the repair are on file at this facility.

Michael Snyder
CRS No. K5SR339N

Signature

These items identified above were repaired and/or inspected in accordance with current Federal Aviation Regulations and the repairs are approved for return to service. Pertinent details of these repairs are on file at the repair station under Work Order Number SLC-MX694.
